

ROOFNADO™

SYNTHETIC ROOF UNDERLAYMENT

Switch TO ROOFNADO™ AND SAVE!

Leak protection for less

For a fraction of the overall installation cost, homeowners and roofing contractors alike can rest assured knowing that their roof is securely protected not only during construction but also against the event of primary roof failure.

Up to 30% Less Labor

Roofnado products require less labor to install than traditional black tar paper. They are longer, wider and easier to handle than felt and, if installed correctly, require no call backs for post install repairs. All of which can easily save up to 30% on labor, time and money.

ALL WEATHER FLEXIBILITY

Don't let the weather control your schedule. Dry-in your projects faster and schedule more jobs with confidence. Unlike traditional black tar paper, Roofnado synthetic underlayments can withstand long periods of UV exposure without drying out, cracking or becoming brittle. With Roofnado underlayments installed, Mother Nature doesn't stand a chance!

Fewer trips up the ladder

A 5,000 sq. ft. roof requires as few as 5 rolls of Roofnado vs. 24 rolls of #30 felt.

No more felt blow-offs!

Roofnado is up to 18x stronger than felt! Roofnado stays secured to the deck in all weather conditions and will not tear around fasteners.

Quicker, smoother & up to 450% more coverage

Roofnado is wider, longer and has fewer laps than felt. It lays flat and will not wrinkle or distort when wet.

Steep slope confidence

Roofnado combines mechanical and chemical slip resistant technologies for next gen. walkability and unmatched roofer comfort and safety.

Inventory Fewer Rolls

Space and weight costs money. Whether it's in the back of your truck or in your warehouse you will save money every time you install with Roofnado. 5 rolls of 10 square Roofnado will cover 5,000 square feet vs. 24 rolls of #30 felt.

5 ROLLS OF ROOFNADO

Weight per square: 3.9 lbs (StormTread™)

5 ROLLS OF ROOFNADO VS. 24 ROLLS OF TAR PAPER

24 ROLLS OF TAR PAPER

Weight per square: 27.5 lbs #30 felt (Individual product weights will vary between manufacturers.)

LapLock™ Dual-Locking Lap Seal Technology

Industry Leading Technology

With LapLock™ PSU (HT), every lap is protected from water ingress by a double action locking adhesive! The first lock is 3" wide strip of highly sticky adhesive that pressure bonds to the 3" overlap section below it. And the second lock is a 1" wide strip of adhesive that locks upward onto the underside adhesive of the sheet above forming a water-tight seal. Correctly installed with the double-locked laps, standing water, dammed water or wind-driven water is blocked from penetrating the roof deck.
